## Laser Dentistry

Dr. Lunn has recently added a WaterlaseMD dental laser to his practice. This machine does both hard and soft tissue procedures.

Heat, vibration and pressure are the primary causes of pain associated with the use of the traditional dental drill.

Since the laser produces none of these, your dentistry is more comfortable and requires less anesthetic with fewer shots.

Because the laser operates with surgical precision, healthy tooth structure is preserved. It produces less trauma to teeth and tissue promoting a faster healing response.

Due to its conservative, gentle cutting action and coagulating capabilities, the WaterlaseMD performs many procedures on the gums with little or no bleeding. It minimizes post-op swelling saving you discomfort and waiting time for follow-up

procedures.

It can also be used to remove oral growths or excess tissue within the mouth. Esthetic removal of pigmentation from gums is also possible.

The laser may be used on cold sores, fever blisters or herpetic lesions to decrease the pain associated with the lesions and increase healing time.

We are looking forward to this leading edge technology improving our delivery of services. There is no additional cost for the use of the laser. See our website [www.dentist-lunn.com](http://www.dentist-lunn.com) for more information on the Laser.
